Florida Regions Map

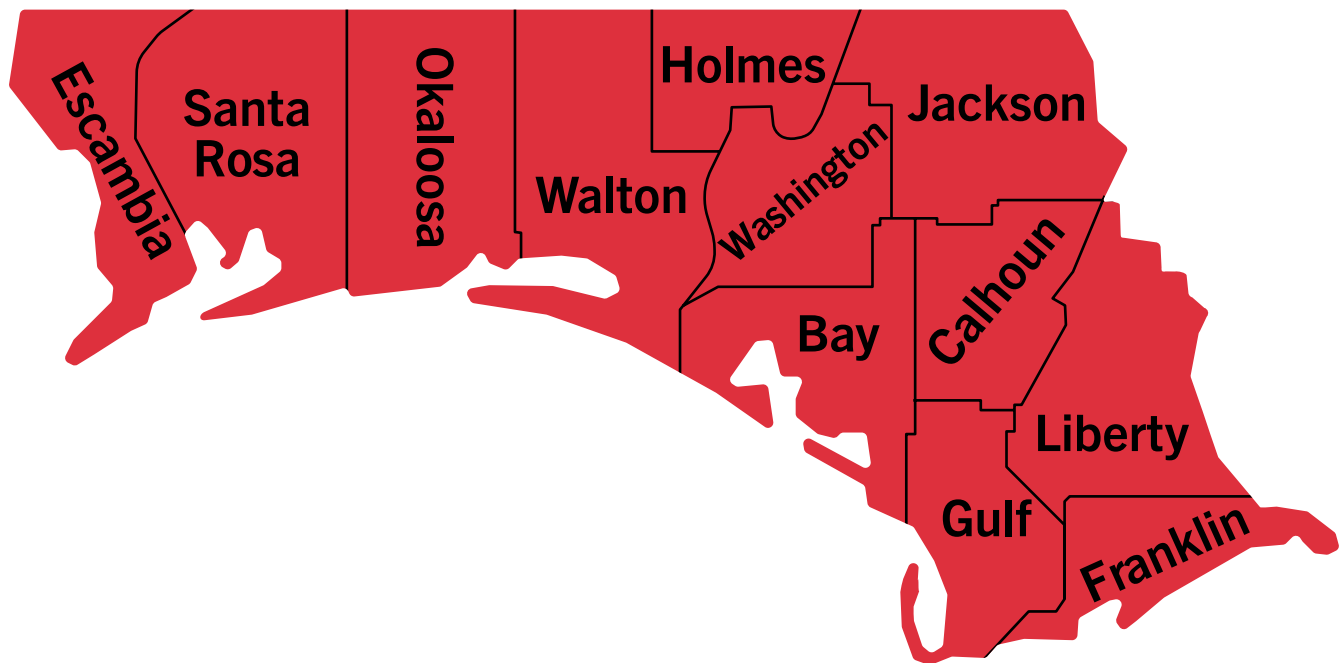

Introduction

The Florida Center for Nursing (FCN) was established in 2001 to address issues related to the state's supply and demand for nurses (Florida Statute §464.0195). Consistent with Florida statute (§464.0195), the FCN conducted an analysis of the supply and demand of the nursing workforce in Florida. *The State of the Nursing Workforce in Florida 2023 report* provides information about the supply and demand of Florida's nursing workforce.

This supplemental report, *Florida's Nursing Workforce Supply by County*, takes a deeper dive into the supply data. *Florida's Nursing Workforce Supply by County* provides a summary of the supply of nurses for each county in Florida. Nursing workforce characteristics at the county level are compared to the state and national workforce characteristics. Additionally, the county level nursing demographic characteristics are compared to state and national population characteristics per the U.S. Census Bureau. This report sheds new light on the extent to which the demography of the nursing workforce matches the communities they serve.
